Profile

Dedicated front-end software engineer with expertise in HTML, CSS, JavaScript, plus Tailwind, Sass, and React frameworks. Excels in building responsive, user-friendly web interfaces.

Frontend Web Developer

My Projects

Shopper

Shopper is an e-commerce front-end web application designed to place and manage customer orders. It includes an admin dashboard for reviewing and marking orders as 'completed.'

Tech stack: React, Javascript, CSS.

Two Truths and A Lie

Two Truths and A Lie is a game we developed for the Codedex Christmas Hackathon Challenge. In this game, players are presented with two truths and one lie about characters and must identify the lie. Players illuminate one of the ten lights on the Christmas tree for each correct answer.

Lavender

Lavender Addresses the challenge of students' mental health struggles due to resource limitations. The solution bridges the gap between family and professional support. I implemented the UI design and added responsiveness using Bootstrap and EJS.

Tech stack: Javascript, EJS, Bootstrap.

IP Address Tracker

IP Address Tracker users can view their IP address on a map upon the initial page load. They can also search for IP addresses or domains and see their locations. The layout optimizes automatically for the best viewing experience on each device's screen size.

Other Projects

Intro Section with Dropdown Menu, Time tracking dashboard, REST Countries API with color theme switcher, Results summary component, Newsletter sign-up form with success message, Age calculator App, Sunnyside agency landing page
